Silicone Scar Dressing

Cautions

1. If no irritation or skin rash occurs during use, please stop using the dressing until the symptoms disappeared and continue to use it after the recovery of the skin, or follow the doctor's advice.
2. Please avoid applying or remove the dressing when bathing. Please check the adhesive ability of the dressing after bathing. If the adhesive ability is lost, please replace it in time.
3. This product is suitable for preventing scar hyperplasia, other initial healing of various wounds, and the effect will be better if used at an early date. It can be used 48 hours after removing all sutures on the surgical incisions.
4. This product can also improve some distal symptoms for old scars over 6 months.

Foam Dressing

Foam Dressing

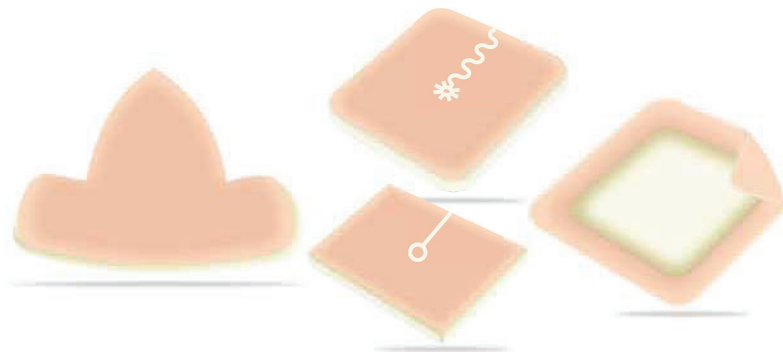

Foam dressing is a new dressing made of medical polyurethane containing CMC and made by the latest foaming process

Foam Dressing

Main Function Principles

1. It has rich cellular structure and strong and rapid liquid absorption amount
2. Gel is formed on the wound after liquid absorption to keep the wound moist
3. It has the ability to retain exudate in situ, i.e. the function of "locking water"
4. The surface of the product can be covered with semi-permeable polyurethane film, which is waterproof and breathable and can block invasion of external bacteria, foreign matters and the like
5. It has softness, elasticity and compliance characteristics to prevent the wound from being pressed
6. The cellular structure can absorb the odor of the wound

Hydrocolloid I.V. Dressing

Hydrocolloid I.V. Dressing

The patented Hydrocolloid I.V. Dressing is made of specially formulated hydrocolloid by special process. It has the characteristics of breathable, liquid absorption, no sensitization, promoting wound healing at the puncture site and preventing phlebitis. It is especially suitable for poor skin conditions at puncture sites, such as allergic skin, skin damage inflammation, burns, chronic wasting diseases, and puncture care for infants and the elderly.

PE Foam I.V Dressing

PE Foam I.V Dressing

Ultra-thin design for perfect fitting on the skin.
The high air permeable polyurethane (PU) film is completely transparent, making it easy to observe the injection site and wound conditions

Multi-microporous PE Foam is breathable, and extends the dressing time

Additional tape makes the fixation safer and firmer

Product Selection

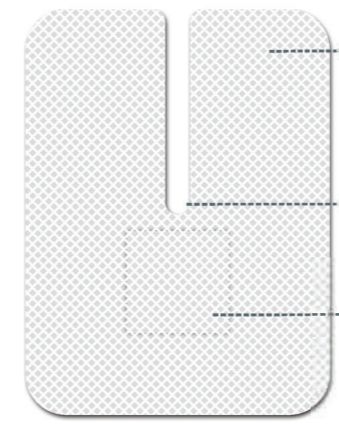

Reorder No.	Size	Quantity
1040	2.91"x3.78" (7.4cmx9.6cm)	40/50/Cs
1050	2.95"x4.33" (7.5cmx11cm)	40/50/Cs

Non-Woven I.V. Dressing

Non-Woven I.V. Dressing

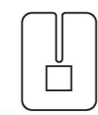

Non-woven I.V. dressing with rounded corner design, which is not easy to curl and fall off during the application. At the same time, the non-woven material indwelling needle sticker has better air permeability and moisture absorption. The absorbent cotton pad in the center of the dressing can not only absorb the pinhole exudate, prevent skin maceration, but also maintain local cleaning and reduce infection.

The spunlaced non-woven fabric is coated with special acrylate glue, which is firmly adhered, not easy to curl, not fall off when expose to water, and easy to peel off and with low sensitization.

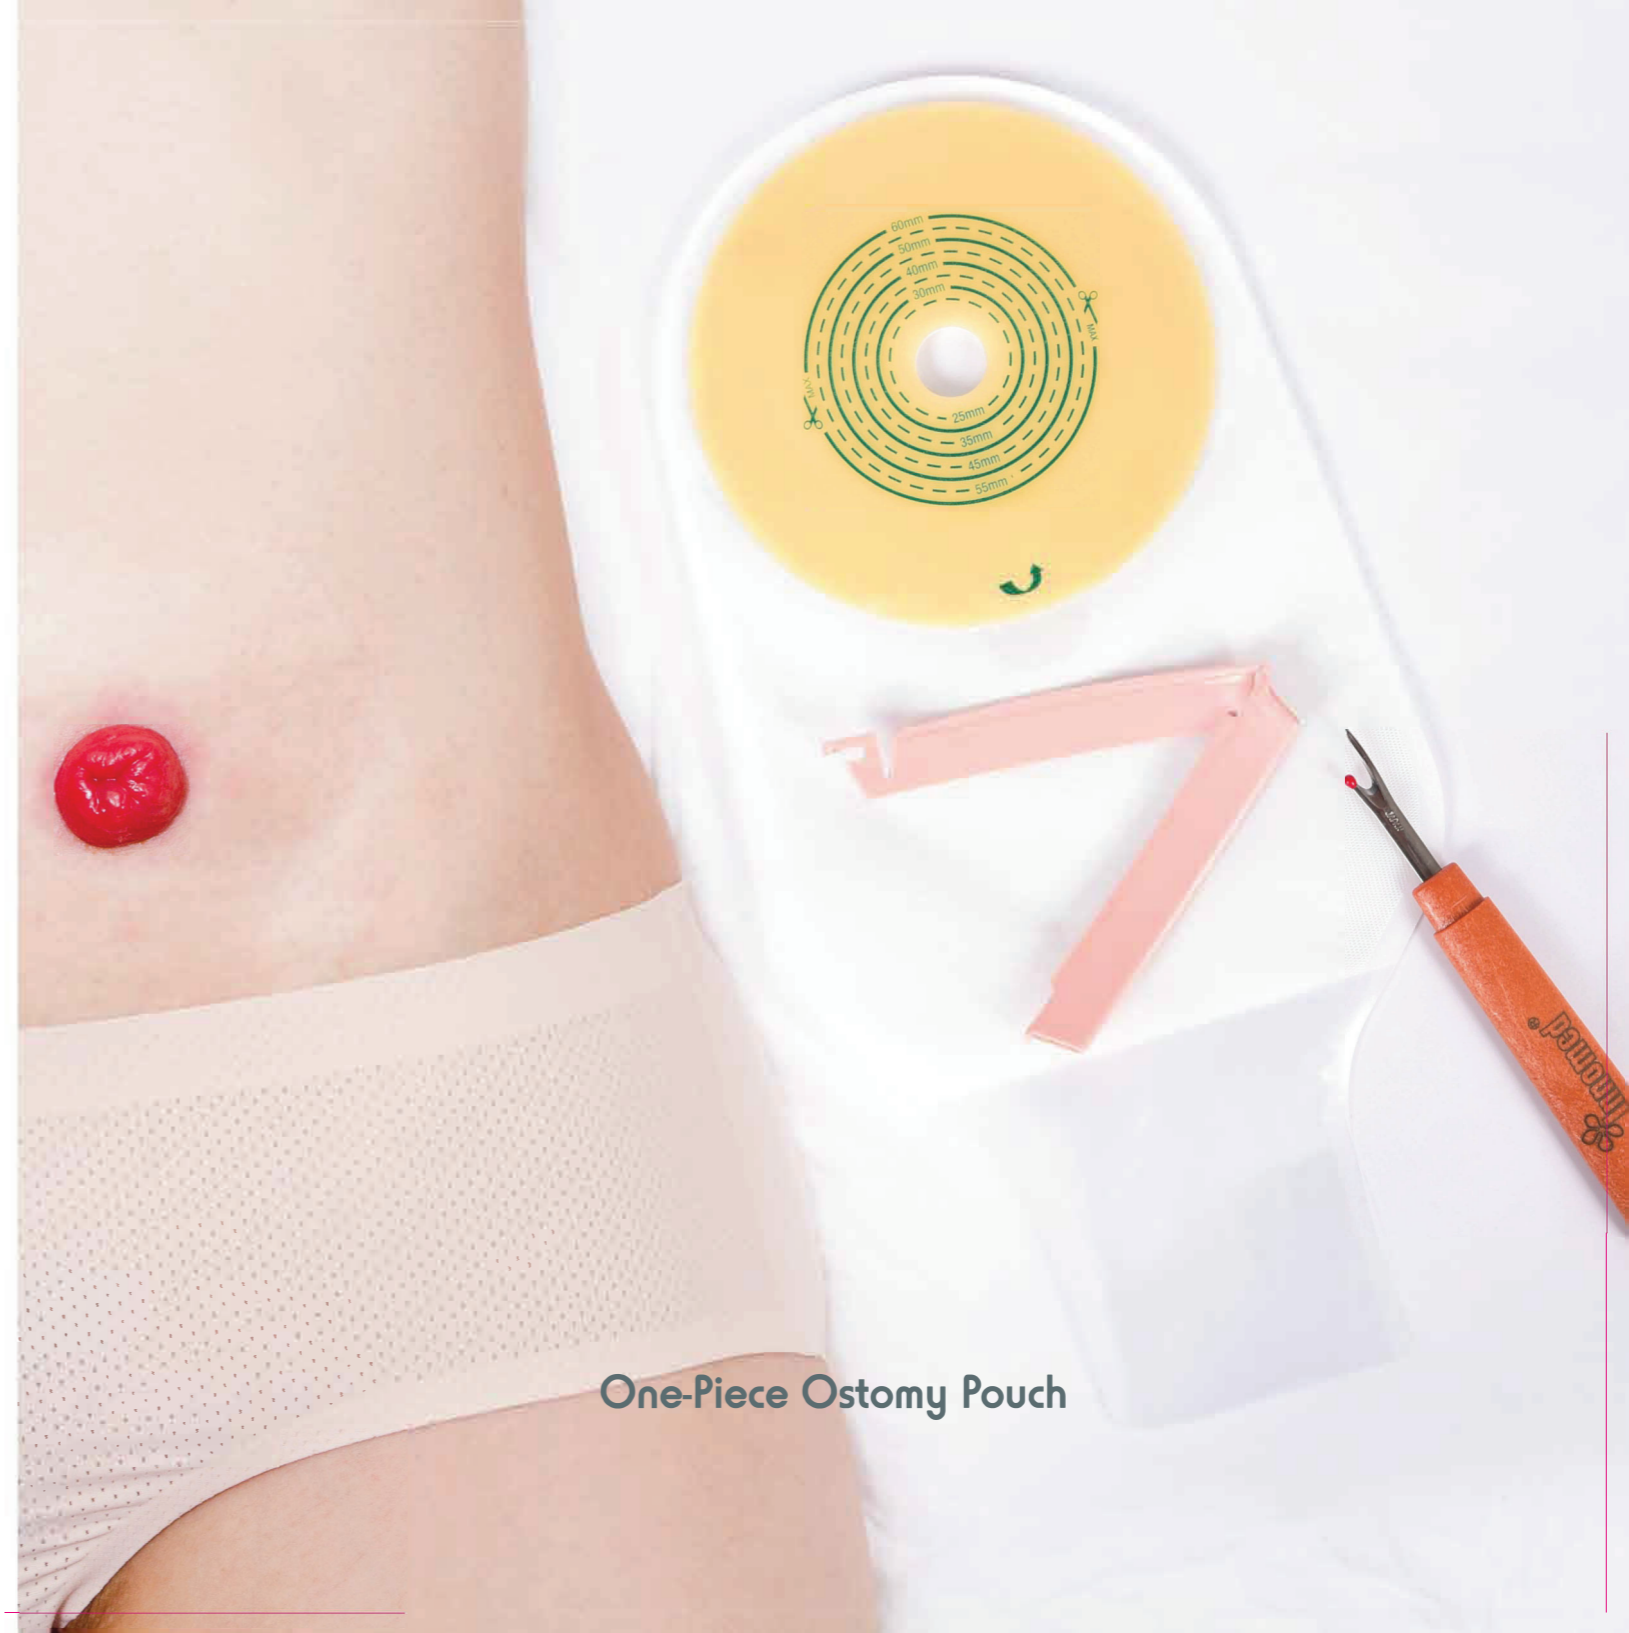

The "U" shaped design make the fixation of needle wing more convenient and firmer.

The absorbent cotton pad make it better function of absorbing pinhole exudate.
